

Talking points ref. BMAC.

- We have completed the radiation screening at BMAC and collected data from 60,000 points and more than 100 soil samples including background.
- We are continuing to evaluate the data from the gamma screening and expect a screening report within 2-3 weeks.
- We also took more than 100 soil samples for analytical testing for uranium, thorium and radium.
- EPA maintains its position when we started this screening that all of the scientifically validated data known to EPA and the State of Missouri confirms that BMAC remains suitable for use.
- EPA conducted this radiation screening program at BMAC to confirm this and to respond to public concerns.
